

# **The Literacy and Numeracy Catch-up Premium for Year 7 Pupils**

## **Background**

Under the School Information Regulations effective from 1 September 2013 the school is required to publish information regarding the catch-up premium.

The catch-up premium is paid for all students who did not achieve level 4 at the end of Key Stage 2 (on leaving Primary school) in reading and/or maths. The amount paid is £500 per student not achieving this level in either area, however if a student has not achieved level 4 in both areas that student attracts £500 in total.

## **Plans to spend the current year's allocation 2013/14**

The allocation to Homewood School & Sixth Form Centre for 2013/14 is £50,500. This is being spent over the year on the following interventions:

Attendance monitoring, community support, counselling, mentoring, Mini school office support, SEN 1 to 1 support, SEN small group support, Learning Support Assistants (classroom assistants) and Higher Level Teaching Assistants. Higher Level Teaching Assistants are employed in numeracy and literacy in Key Stage three and this premium goes towards their costs as well.

Overall costs relative to the interventions and support mechanisms for this group of students will comfortably exceed the allocated funding.

## **Expenditure in 2012/13**

The previous year's allocation was £41,000 and this was spent across the same interventions and support. In 2013/14 the school introduced an additional HLTA role for literacy.

## **The educational effect of the expenditure in 2012/13 and the current year to date**

We have collected data on these students to measure their performance against the other students in year 7. It is important to note that two sub levels of progress is the national expectation to the end of year 7, (the figures below relate to the end or during year 7).

For literacy in 2012/13 the percentage of students who attracted the funding and who achieved two or more sub levels of progress from September 2012 to July 2013 was 30%. This compared to 22% for the pupils from the rest of the year group who achieved two or more sub levels of progress.

For numeracy in 2012/13 the percentage of students who attracted the funding and who achieved two or more sub levels of progress from September 2012 to July 2013 was 55%. This compared to 61% for the pupils from the rest of the year group who achieved two or more sub levels of progress.

In 2013/14 we have reviewed progress to the end of March 2014:

For literacy in 2013/14 the percentage of students who attracted the funding and who achieved two or more sub levels of progress from September 2013 to March 2014 was 47%. This compared to 33% for the pupils from the rest of the year group who achieved two or more sub levels of progress.

For numeracy in 2013/14 the percentage of students who attracted the funding and who achieved two or more sub levels of progress from September 2013 to March 2014 was 75%.

This compared to 56% for the pupils from the rest of the year group who achieved two or more sub levels of progress.

### **Summary**

Whilst it can be difficult to show exactly the benefits of additional expenditure and the specific results of applying this to a particular group of students, we are pleased that the catch-up premium students are out-performing the rest of the cohort with the exception of mathematics in 2012/13 where the whole year group did extremely well.

We are convinced that the additional grant has been put to excellent use and these students will continue to be an important area of focus for us. In 2014/15 we will see the Key Stage 3 area incorporated into the Discovery College and with form tutors and college support staff dealing specifically with years 7 and 8 we believe that additional support will be forthcoming.
